

## Spin Engenharia: energy to grow

*Company with over 20 years plans fast growth*

By Spin Engenharia, October-2014.

**Brasilia, DF** – Spin Engenharia de Automação Ltda. emerged as an incubated business at the University of Brasilia Centre for Technological Development (CDT) - UNB. With 22 years and an enviable portfolio of clients in the Brazilian energy market, the company looks to the future and outlines strategies to expand its operations.

With two masters in Computer Science as founding partners, Spin started its activities with the full development of SCADA (Supervisory Control and Data Acquisition) software ActionView. Reliable, simple, functional and malleable, it is currently deployed in more than twenty operation centers and hundreds of sites as substations, power plants, wind, thermal parks and intelligent buildings. One by one those are evidences of customer confidence.

Currently, the company makes a technological leap with the development of innovative tools that aim to further improve the productivity of its customers. In this new phase, Action<sub>0</sub>NET (SCADA) and Action<sub>0</sub>GRID (Smartgrid) have established themselves as the two main sources of Spin solutions for the energy market.

Building a network of VARs (Vallue-Added Resellers) focused on Action<sub>0</sub>NET is another innovation that the company sought to expand its reach and offer SCADA software in the cloud for different audiences, beyond the electric market.

In some aspects, future Spin is very similar to old Spin: the same determination, energy and commitment to deliver the best to its customers. Moreover, the company grows, using their unique characteristics into the future.

### About Spin

Spin Engenharia de Automação (Automation Engineering) was born in 1992 and works with electrical automation since then. Providing supervision, control and management of electricity networks the company established its name and has a portfolio of clients in all regions of Brazil.

Technology development is a cornerstone of Spin, which seeks the best solutions for its customers and partners.
